

Faculty of Science & Technology
PES's Modern College of Engineering
(An Autonomous Institute Affiliated to Savitribai Phule Pune University)

Level 7: First Year M. Tech. (2024 Pattern)

Course Code	CSE08651
Course Name	Skill Development – II
Semester	IV
Experiment No.	3
Title	Proposal Writing using Overleaf

Problem Statement

To study and analyze the use of online collaborative document preparation tools for writing structured and well-formatted research proposals.

Objective

To make use of Overleaf for creating, editing, and managing research proposals using LaTeX in a collaborative and efficient manner.

Outcome

CO653.3: Use document preparation tools to develop structured and well-formatted research proposals.

Software / Hardware Requirements

- Overleaf Online LaTeX Editor
- Web Browser (Google Chrome / Mozilla Firefox)
- Internet Connectivity
- Personal Computer or Laptop

Theory

A research proposal is a formal document that outlines the objectives, methodology, scope, and significance of a proposed research work. Writing a well-structured proposal is essential for clearly communicating research ideas and obtaining approval from academic committees or funding agencies. Proper formatting, clarity, and organization are critical components of an effective research proposal.

LaTeX is a widely used document preparation system that is particularly suitable for academic and technical writing. It provides powerful tools for managing document structure, references, equations, figures, and tables with high typographical quality. Unlike conventional word processors, LaTeX separates content from formatting, ensuring consistency and professional presentation.

Overleaf is an online collaborative LaTeX platform that allows users to create and edit documents directly through a web browser. It supports real-time collaboration, version control, and easy sharing of documents. By using Overleaf, researchers can efficiently develop research proposals, maintain formatting consistency, and collaborate seamlessly with supervisors and team members.

Steps Involved

1. An Overleaf account was created using an institutional or personal email ID.
2. A new LaTeX project was created using a suitable proposal template.
3. Sections such as introduction, objectives, methodology, and timeline were added.
4. Required formatting and document structure were implemented using LaTeX.
5. The proposal document was compiled and reviewed for correctness.

Results

A structured research proposal was successfully created using Overleaf. The document was properly formatted using LaTeX and compiled without errors.

Analysis and Conclusion

Analysis: Overleaf simplified the process of proposal writing by providing a collaborative environment and automated formatting features, reducing manual formatting effort.

Conclusion: Overleaf is an effective tool for academic proposal writing. Its integration with LaTeX ensures professional document quality and supports collaborative research activities.
